

## ALR SCREEN

# VAVA ALR

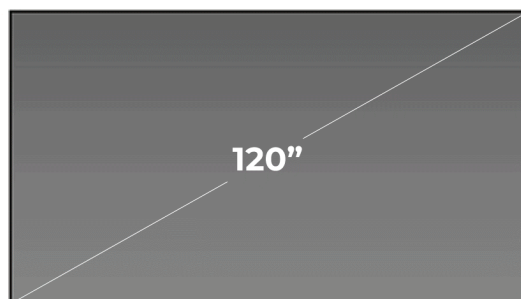

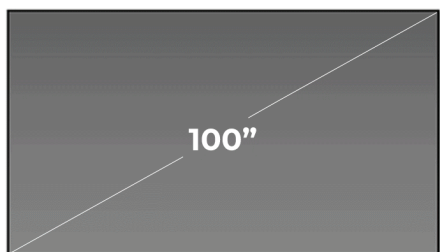

- Ambient Light Rejecting**  
 The engraved toothed grid structure on the ALR screen's surface filters out up to 92% of the overhead ambient light. It brings vivid colors and crisp images to your home, even during the day.
- How the ALR Screen Works**  
 The serriform microstructure on the screen's surface rejects ambient light coming from the ceiling, enhancing the contrast and color saturation of the projected images.
- Big Screen Experience**  
 The 100" or 120" screen, 16:9 aspect ratio, and 1" slim aluminum frame maximizes the projection area and enhances the overall screen appearance to achieve a giant-screened laser TV effect.
- Ultra-Thin Bezels**  
 The 1-inch edge gives the screen an even wider appearance — perfect To immerse yourself in your favorite shows, movies, and games.

ALR	92%
Gain	0.6
Viewing angle	160°
